WHEN SECONDS COUNT

RELIABLE, FAST OPERATION

The Extreme™ Series High Performance Sectional Door is powered by a LiftMaster® Operator. It features an average opening speed of 24" per second, a direct drive system, and lists daily duty cycles at 600 cycles/day over a two-year warranty period. This advanced operator, with LiftMaster's® torque sensing technology, can connect to WiFi for access to myQ® Facility for remote monitoring, over-the-air updates, and more.

ENGINEERED FOR LONGEVITY

At five times - the spring life of a traditional sectional door, Extreme Series High Performance Doors come standard with robust hardware, double end stiles, and an upgraded lift cable for optimal performance. Advanced soft start and stop features minimize wear and tear.

ENHANCED SAFETY

Manufactured with safety in mind, the Extreme Series Sectional Door features a light curtain with three feet of protection. Plus, it includes a cable management system and cable tension monitors, which mitigate door operation if cables become slack or break. Wireless edge options are also available as an additional protective component.

CUSTOMIZABLE OPTIONS

The contemporary-style EX904L is available with full-view windows. For temperature control and noise reduction, insulated EX3200L and EX3700L models are available with various glass options. All models include standard 500mA at 24 VDC power and two relay outputs, available lights, horns, and strobes.
