WHEN SECONDS COUNT

RELIABLE, FAST OPERATION

The Extreme™ Series High Performance Sectional Door is powered by a LiftMaster® Operator. It features an average opening speed of 24" per second, a direct drive system, and lists daily duty cycles at 600 cycles/day over a two-year warranty period. This advanced operator, with LiftMaster's® torque sensing technology, can connect to WiFi for access to myQ® Facility for remote monitoring, over-the-air updates, and more.

ENGINEERED FOR LONGEVITY

At five times the spring life of a traditional sectional door, the EX Series Door comes standard with robust heavy-duty hardware, double end stiles, and upgraded lift cable for optimal performance. Advanced soft start and stop features keep wear and tear on the door at a minimum.

ENHANCED SAFETY

Manufactured with safety in mind, the Extreme Series Sectional Door features a light curtain that provides 3 feet of protection. This door also includes a cable management system and cable tension monitors, mitigates door operation if cables become slack or break. Wireless edge options are also available as an additional safety device.

CUSTOMIZABLE OPTIONS

Model EX904L and full-view vision windows are available where visibility is preferred. Insulated options (EX3200L and EX3700L series) are available for temperature control and noise reduction with various glass options. Included as standard 500mA at 24 VDC power and two relay outputs and optional lights, horns, and strobes.
